

Dorgard & Dorgard Pro

Solutions for **wedged open fire doors?**

As the country is slowly released from lockdown, owners and operators of all types of premises are formulating their return to work strategies, working on how their premises can be made “Covid Secure”.

Southern Security Services Ltd have been working through the lockdown, developing various systems to help fight the spread of the virus and are proud to offer DORGARD as part of the solution.

Many properties will be required to provide a one way pedestrian traffic flow, prevent common touch points and improve ventilation, this may utilise doors classified as fire doors, and as such should not be propped open.

DORGARD provides the solution, all doors can be held open, providing one way pedestrian traffic flow, without human contact with doors or door furniture, also improving ventilation and circulation of fresh air. However in an emergency the door will automatically close.

Dorgard™

We've opened the door to safer buildings

Benefits

Free Flowing Pedestrian
Traffic

No Physical Contact
with the Door or
Door Furniture

Allows for Good
Ventilation

Wire-free Technology

Carpet friendly

Infection Control

Door handles are infection hot spots and we commonly touch them many times a day. We all want to do the best we can to keep everybody safe, so fire doors should normally be kept closed. The spread of fire in a building is potentially more life threatening than the Covid19 pandemic that is sweeping the globe. This means that wedging fire doors open is not an option.
